Application Number: 10/535,076

## **Listing of Claims:**

This listing of claims will replace all prior versions, and listing, of claims in the application.

Claims 1-15 (Canceled)

(Presently amended) A method of reducing the number of Claim 16. nucleation mode particles in the emissions from a heavy duty diesel engine fitted with a catalyzed particulate trap, which is a continuously regenerating trap (CRTTM) comprising both an oxidation catalyst catalyzed and a particulate trap, which method comprises lubricating a heavy duty diesel engine using an with a lubricating oil consisting essentially of an anti-wear, anti-oxidant and corrosion-inhibiting lubricating oil having a low sulphur content of less than 0.4% by weight and comprising ZDDP and optionally at least one additional additive selected from the group consisting of an anti-wear additive, an anti-oxidant additive, a corrosion inhibitor, an anti-foam additive, a Viscosity Index improver and a dispersant, wherein ZDDP is present at a concentration of up to 0.8 percent by weight, and employing in combination with a fuel having a low sulphur content of below 50 ppm by weight, to thereby reduce the emissions of nucleation mode particles from the heavy duty diesel engine fitted with a catalyzed particulate trap, wherein the nucleation mode particles have a diameter in the range of from 1 nm up to 30 nm inclusive.

Claims 17-24. (Canceled)

Claim 25. (Previously presented) A method according to claim 16, wherein the sulphur content (by weight) of the fuel is below 20 ppm.

Claim 26. (Previously presented) A method according to claim 25, wherein the sulphur content (by weight) of the fuel is 10 ppm or lower.

Claims 27-32. (Canceled)

Application Number: 10/535,076

Claim 33. (Presently amended) A method according to claim 16, wherein the low sulphur lube-lubricating oil has a sulphur content (by weight) of less than 0.3%.

Claim 34. (Presently amended) A method according to claim 33, wherein the <u>lube low sulfur lubricating</u> oil has a sulphur content (by weight) of less than 0.2%.

Claim 35. (Presently amended) A method according to claim 34, wherein the <u>lube low sulfur lubricating</u> oil has a sulphur content (by weight) of less than 0.15%.

Claim 36. (Presently amended) A method according to claim 16, wherein the <u>low sulfur</u> lubricating oil comprises one or more anti-wear additives selected from the group consisting of (a) molybdenum containing compounds, (b) organic based friction modifiers, and (c) salicylate-type detergents.

Claim 37. (Presently amended) A method according to claim 16, wherein the <u>low sulfur</u> lubricating oil comprises one or more anti-oxidant additives selected from the group consisting of aromatic amines and phenolic compounds such as <u>hindered phenolics</u>.

Claim 38. (Presently amended) A method according to claim 16, wherein the <u>low sulfur</u> lubricating oil comprises one or more corrosion inhibitor additives selected from the non-sulphur detergent additivies.

Claim 39. (Presently amended) A method according to claim 16, wherein the <u>low sulfur</u> lubricating oil comprises one or more other additives selected from one or more of anti-foam additives, Visocity Index improvers and dispersants.

Claim 40. (Canceled)

Application Number: 10/535,076

Claim 41. (Presently amended) A method according to claim 16, wherein the nucleation mode particles have a diameter in the range of from greater than 3 nm to 7 30 nm inclusive.

Claims 42-52. (Canceled)

Claim 53. (Presently amended) A method of according to claim 16, wherein the <u>low sulfur</u> lubricating oil has a ZDDP contained at most content of up to 0.4% by weight.

Claims 54-58. (Canceled).
